kokomo 24/7™

ANDERSEN GLOBAL®

BACKGROUND AND CHALLENGES

Andersen Global was established in 2013 to provide tax and legal services around the world. The company is also an association of legally separate, independent member firms, comprised of more than 6,000 professionals worldwide, over 800 global partners, and a presence in over 214 locations worldwide.

The negative impacts of COVID-19 are unprecedented and pervasive at a variety of levels, extensively spreading from employees at the headquarters to partners all over the world. COVID-19 is not only a crisis of individuals' health but has substantially affected the company's operations, as evidenced by the growing number of employees getting infected and working from home. The leaders at Anderson are concerned about symptoms, preventions, and screening, and desires to employ measures to resume onsite business operations.

OUR SOLUTIONS

To help Anderson Global create a safer workspace for their employees, we designed solutions to assist them with employee's daily screening, employees and guest check in/out, as well as incident management solutions. We integrated our system to their existing mobile app as well as their HR system via secure connection.

BENEFITS

- Kokomo 24/7's COVID19Tracker allows each employee to quickly detect and isolate cases to reduce prevalence onsite. Therefore, the user IDs and locations of individuals who may be infected are checked before entering the site and are documented in the system.

- Allows the core team to concentrate on the expansion of the firm on a global level without gearing down on the number of employees working onsite.

- The sFTP integration with Andersen's active directory allows automatic updates on employee population so that the administrators won't have to continuously monitor and update the employee records within the system.

- Highly configurable and intricate role matrix provides capability to setup security groups for the user base that guarantees protection of sensitive data or personally identifiable information.

- Check-in data analysis facilitates conducting contact tracing to prevent further spread of COVID-19 cases within office spaces. Both the employees and the visiting guests can be monitored using this feature.

- Readily available user and survey data export features give a bird's eyes view on the current health status of the employee population. It allows the organization to quickly identify how many employees are infected, quarantined, or exposed.

- QR code screening systems are rolling out across the world, which enables seamless interaction and sharing of information between Andersen employees and users around the world.

- Our system allows employees in offices with different time zones to communicate quickly and efficiently.

- Cost-effective while delivering the optimal outcome.
