

Simplifying Enterprise Asset, Resource, and Workplace Safety Management

A Quick Introduction to the Kokomo24/7® Software Platform

www.kokomo247.com

Executive Summary

Managing today's evolving enterprise is an increasingly complex task that spans many different areas. But centralized software platforms are making it much easier by providing simple, effective tools and meaningful data to help us track and manage everything from employee health and wellness to enterprise assets, occupancy, and workplace safety.

That's the idea behind Kokomo24/7®, a robust software platform that was originally developed as a health, safety, and wellness solution but has expanded into asset and IT service management with the help of Zebra RFID tracking technologies.

Kokomo24/7® is a cloud-based software platform that works with Zebra RFID to help you digitally and accurately track and manage your enterprise assets as well as your occupancy, workplace safety, and much more. Our simple yet powerful tracking technology and tools allow you to wirelessly track, locate and manage everything from IT devices and office equipment to shared workspaces, conference rooms, EV charging stations, employee access to restricted areas, and even employee locations in the event of an emergency.

In this quick guide, we'll introduce you to Kokomo24/7®, how it works, and how it helps your IT, HR, and other organizational teams manage assets, resources, and workplace safety with a single platform and a complete set of streamlined digital tools.

Instead of the headaches, chaos, and limitations of managing things with different digital solutions, you can use one centralized toolset to make even the most complex situations amazingly simple to manage. So, let's jump in and take a look at Kokomo24/7® and what it can do for you.

Asset, Occupancy, and Workplace Safety Management

Kokomo24/7® is a modular software platform with tools to help with an array of tasks across multiple areas of your organization and operations. These include our Access™ module for managing enterprise assets, shared workspaces, occupancy, and resources, and our Triage™ module for managing workplace safety and emergency response.

Let's walk through how you can use our Access™ module and tools to simplify and digitize your tracking, management, and workflows in these areas.

Access™ Enterprise Asset Management

Kokomo's Access™ module works together with Zebra RFID solutions to help you wirelessly track, locate, and manage your enterprise assets, service management, maintenance, and repairs.

This way, you can always know where any asset is located, who's using it, when it should be returned, when it should be serviced or repaired, and avoid costly losses or replacements.

You simply print an RFID tag, apply it to an item, and our software works with Zebra RFID readers to automatically identify, track and locate it, with data and reports on its current status and last-known location.

You can also track who's checked out or checked in an asset and if it needs maintenance, servicing, or repair. Additionally, you can use our software to track software licenses as well.

What You Can Do:

- Instantly know the location of every asset.
- Easily manage check-outs and check-ins.
- Track software licenses for optimal subscription counts.
- Digitally track maintenance, service, and repairs.
- Avoid costly replacements for lost or missing items.
- Save money with better asset visibility and control.

Access™ Occupancy Management

Kokomo's Access™ module also includes tools to help you conveniently manage shared workspaces and resources with ease. Your team can book shared rooms or resources with the click of a button, and optional digital badging allows users to check in and check out via QR codes.

Using resource reservations, custom floor mapping, time slots, and intuitive dashboards, you can easily schedule and manage reservations for shared workspaces, conference rooms, devices, EV charging stations, parking spaces, and much more.

You can even see the status of every resource, including whether it's reserved, in use, needs cleaning, or is available. Once resources are booked, users can revise or cancel their reservations anytime.

Here's a quick overview of how you can use Kokomo24/7® Access™ to manage your resources and occupancy.

What You Can Do:

- Reserve desks, computers, shared workspaces, and conference rooms.
- Reserve shared devices such as two-way radios, generators, and more.
- Reserve EV charging stations and parking spaces.
- Track bookings by resource location or status.
- Apply custom rules and restrictions for users and capacity.
- Upload floor plans to gain insight into locations and capacity.
- Save time and avoid workflow disruptions with easy digital scheduling.

Triage™ Workplace Safety

The Kokomo Triage™ module provides an easy-to-use, holistic, and centralized toolset to help you manage workers and workplace safety.

Triage™ provides tools to control access to restricted areas, send emergency notices, validate completed security patrols, and track last-known worker locations for emergency response. It also provides real-time situational awareness, communication tools, and post - event reporting to help you improve emergency readiness, manage incidents, and help protect your workers.

With one centralized module, you can prepare for emergencies, respond immediately to events, and send notifications to select people or departments to help stay connected with your team members.

When used with Zebra RFID-enabled tracking solutions such as employee ID badges, RFID tags, and RFID readers, you can also control access to your facilities and specific work areas, verify the completion of security checks and tasks, and see the last-known location of employees to help with evacuations or other emergency response.

Here's a quick summary of how you can use Triage™ in your operations.

What You Can Do:

- Control facility or specific location access.
- Apply FEMA's four pillars of emergency management.
- Send emergency and evacuation notices.
- Maintain situational awareness with a dashboard view.
- Verify worker locations for safety.
- Validate completed security or safety checks.
- Get access to real-time data at your fingertips.

Wireless Tagging, Tracking, Locating and Management

Kokomo24/7® is not just a software platform that puts management tools at your fingertips. When combined with Zebra radio frequency identification (RFID), it's also a powerful tracking and locating solution.

Kokomo works together with Zebra RFID technologies to wirelessly and automatically identify, track, and locate your assets, resources and workers. This way, you can manage them seamlessly while you save time and costs, and create a safer workplace.

Print an RFID tag or encode an RFID card.

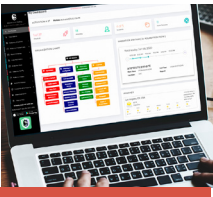

Tag an asset or location or assign an RFID card.

Wirelessly read, identify, and locate tags or cards.

Automatically log asset location and tracking data.

Use your data to manage assets, resources, and safety.

Get alerts and notifications and view detailed reports.

Zebra RFID Solutions and How They Work

RFID is a wireless technology that works much like Wi-Fi. It uses wireless radio signals to transmit data, but instead of delivering internet access, it uses tiny, encoded ID chips and micro transmitters to wirelessly communicate with Zebra RFID readers, portals, antennas, and software.

These technologies work together to identify the ID chip, establish its location, and update its status as well as any related information you wish to maintain. Our Kokomo software helps orchestrate all of this and share it with your other systems and databases as needed.

How RFID Works

An RFID inlay is encoded in a printed tag, or in a printed ID card or badge, so you can use it to track the status and location of assets, individuals (for safety), or even completed tasks.

Zebra RFID Hardware

| | | | | | | |

How Kokomo and Zebra Save You Time and Money

Kokomo24/7® and Zebra RFID give you a seamless, digital way to identify, track, and locate all your enterprise assets, resources, and workplace safety. Ultimately, it's all about saving you time, effort, and cost while providing your workers with the assets and resources they need to work effectively in a safe and well-managed environment

Ways Your Organization Will Benefit

- You'll manage assets, resources, and safety with unprecedented real-time visibility.
- You can manage IT devices, service, resources, and even software licenses more efficiently.
- You can fully digitize and automate your tracking and asset management processes.
- You can put an end to battles, chaos, and confusion over shared resources.
- You can eliminate guesswork, inefficiency, and risk in your enterprise.
- You get access to all the tools and reports you need to do it, all in one place.

Additional Health, Safety and Wellness Management Capabilities

Kokomo24/7®'s modular software provides an array of additional tools to manage your enterprise health, safety and wellness.

- Incident and Compliance Management
- DEI and ESG (TruScore®) Management
- Health, Wellness and Immunization Tracking
- Employee Learning and Accreditation Management
- Employee Engagement and Surveys
- Guest Management and Attendance Tracking
- Live Event Management
- Anonymous Reporting and Emergency Alerts
- Service Request and Workflow Management
